Hedgehog Release Shelter

To make a hedgehog home you will need:

- **4 x** [150mm (6") x 500mm (20")] featheredge board
- **1 x** [75mm (3") half round or arris rail, 500mm (20") long]
- **2 x** Shaped pieces of wood for the front and back

The front and back can be made out of 25mm (1") sawn timber or 19mm waterproof plywood.

230mm (9") high

75mm (3") wide at top

300mm (12") wide at bottom

An entrance hole 100mm (4") wide and 150mm (6") high is required in one end.

The simplest way to fix the home together is with galvanised nails.

Start by fixing the bottom pieces of featheredge to the back and front pieces.

Leave a 25mm (1") overhang front and back to help keep the weather out.

Nail the top two pieces of featheredge on so they are level with the top, they will overlap the bottom pieces.

Finish the house by nailing on the capping, making sure it is placed evenly over-lapping both sides.
